Subject: Application for Data Analyst - Business Intelligence Team

Reference: *Referred by Amrita Singh*

Dear Hiring Team,

I am writing to apply for the Data Analyst position within the Business Intelligence team at Eveez, as referred to you by Amrita Singh. Eveez's work in transforming India's mobility ecosystem through electric vehicles and zero-emission delivery is something I find genuinely compelling and I am eager to contribute to it through the kind of data automation and BI work your team is building.

In my current role as a Data Analyst and Analytics Instructor at Allsoft Solutions under IBM's Career Education Program, I have spent the past several months doing exactly the kind of work this role requires - automating reporting workflows, building real-time dashboards, integrating REST APIs into data pipelines, and translating large-scale data into operational insights for business stakeholders. My core tools are SQL, Python, and Apache Spark, and I have worked extensively with Google Sheets advanced modeling (QUERY, ARRAYFORMULA, dynamic multi-sheet models), Google Apps Script for workflow automation, and Looker Studio for dashboard design.

Here is how my experience maps directly to what Eveez is looking for:

- **Workflow Automation:** Built end-to-end automated pipelines eliminating manual reporting effort - using Python and Spark today, with the same automation-first logic applied via Google Apps Script.
- **Advanced Modeling:** Designed dynamic, multi-sheet analytical models integrating data from multiple sources - structured identically to the Google Sheets QUERY and ARRAYFORMULA models your role requires.
- **BI Dashboards:** Deployed real-time operational dashboards (Streamlit; Looker Studio) tracking KPIs, flagging anomalies, and giving business users self-serve access to live data-1M+ records processed with ~96% accuracy.
- **SQL:** Wrote complex joins, aggregations, and window functions across PostgreSQL and MySQL - delivering clean datasets under strict accuracy SLAs.
- **API Integrations:** Integrated REST APIs into automated data ingestion workflows - directly transferable to Google Apps Script API connector development.

What draws me most to this role is the high-ownership model and the direct visibility into operational decisions. I have always worked best when the work I produce has real consequences - when a dashboard I build actually drives a business call, or when an automation I write actually frees someone from a manual process. Eveez is building

infrastructure for a cleaner future, and I want to be the person making sure that infrastructure is data-informed.

I have attached my resume for your review and would welcome the opportunity to discuss how my skills align with your team's needs. I am available for a call or technical discussion at your convenience.

Yours sincerely,

Dharmender Thakur
